Did you know . . .

Systems Security Technicians make a difference every day.

At A-B Tech, the Systems Security curriculum trains future technicians to help make our community a safe place. Security breaches happen every day. People rely on security experts to keep their data safe and their business running. Security professionals also protect their employer’s reputation by guarding against breaches. The ability to work with others as an effective team member is particularly important for security professionals. Team members must understand their individual responsibilities while additionally being able to contribute positively to accomplishing larger team goals.
