National Science Foundation Proposal Help  
Spring 2021

The National CTC can help Convergence College Network colleges with NSF ATE proposals. The CTC’s Principal Investigator, Ann Beheler, has extensive experience developing ATE grant proposals and has successfully mentored many proposals that got funded. Developing and submitting a competitive proposal is a big job - in addition to the proposal content, there are many required supplementary documents.

But, if you start early, stay organized, and proceed at a measured pace, it is very manageable.

Convergence College Network colleges interested in CTC help need to follow this schedule:

- April 1 – Notify the National CTC of your intent to submit
- May 1 – Discuss your value proposition/outline (which must align with the solicitation) with the National CTC and work to begin creating a competitive proposal
- August 15 – Send full draft of ATE proposal to the National CTC for critical review
- ATE deadline for proposal submission is in early October – the exact date is still TBD pending the release of the newest grant solicitation.

For those Convergence College Network colleges who would like only a commitment letter from the National CTC, that request is due by September 1. The request must be accompanied by a draft of the full ATE proposal.
